

WHAT IS CLAIMED IS:

1. A light emitting display comprising:
a first addressing electrode;
a second addressing electrode; and
a nanomorphiic material layer positioned between the first addressing electrode and the second addressing electrode.
2. The light emitting display according to Claim 1, wherein the nanomorphiic material is a first organic nanomorphiic material adapted to luminesce at a first wavelength.
3. The light emitting display according to Claim 2, further comprising:
a second organic nanomorphiic material positioned between the first addressing electrode and the second addressing electrode in a location other than a location of the first organic nanomorphiic material, the second organic nanomorphiic material being adapted to luminesce at a second wavelength.
4. The light emitting display according to Claim 3, wherein the first organic nanomorphiic material has an equivalent chemical composition when compared to the second organic nanomorphiic material.
5. The light emitting display according to Claim 3, the first organic nanomorphiic material having a first chemical composition, the second organic nanomorphiic material having a second chemical composition, wherein the first chemical composition does not equal the second chemical composition.
6. A light emitting display comprising:
a first addressing electrode;
a second addressing electrode; and

a material positioned between the first addressing electrode and the second addressing electrode, wherein the material luminesces at a plurality of wavelengths.

7. The light emitting display according to Claim 6, wherein the material is nanomorphous.
